Code 55% faster with GitHub Copilot

```
1 # Install a library
2 install.packages("package_name")
3 # Call a library
4 library(package_name)
5 #####
6 # Simple math operations
7 # Addition
8 a <- c(1, 0.1)
9 b <- c(2.33, 4)
10 print(a+b)
11
12 #Subtraction
13 a <- 6
14 b <- 8.4
15 print(a-b)
16
```

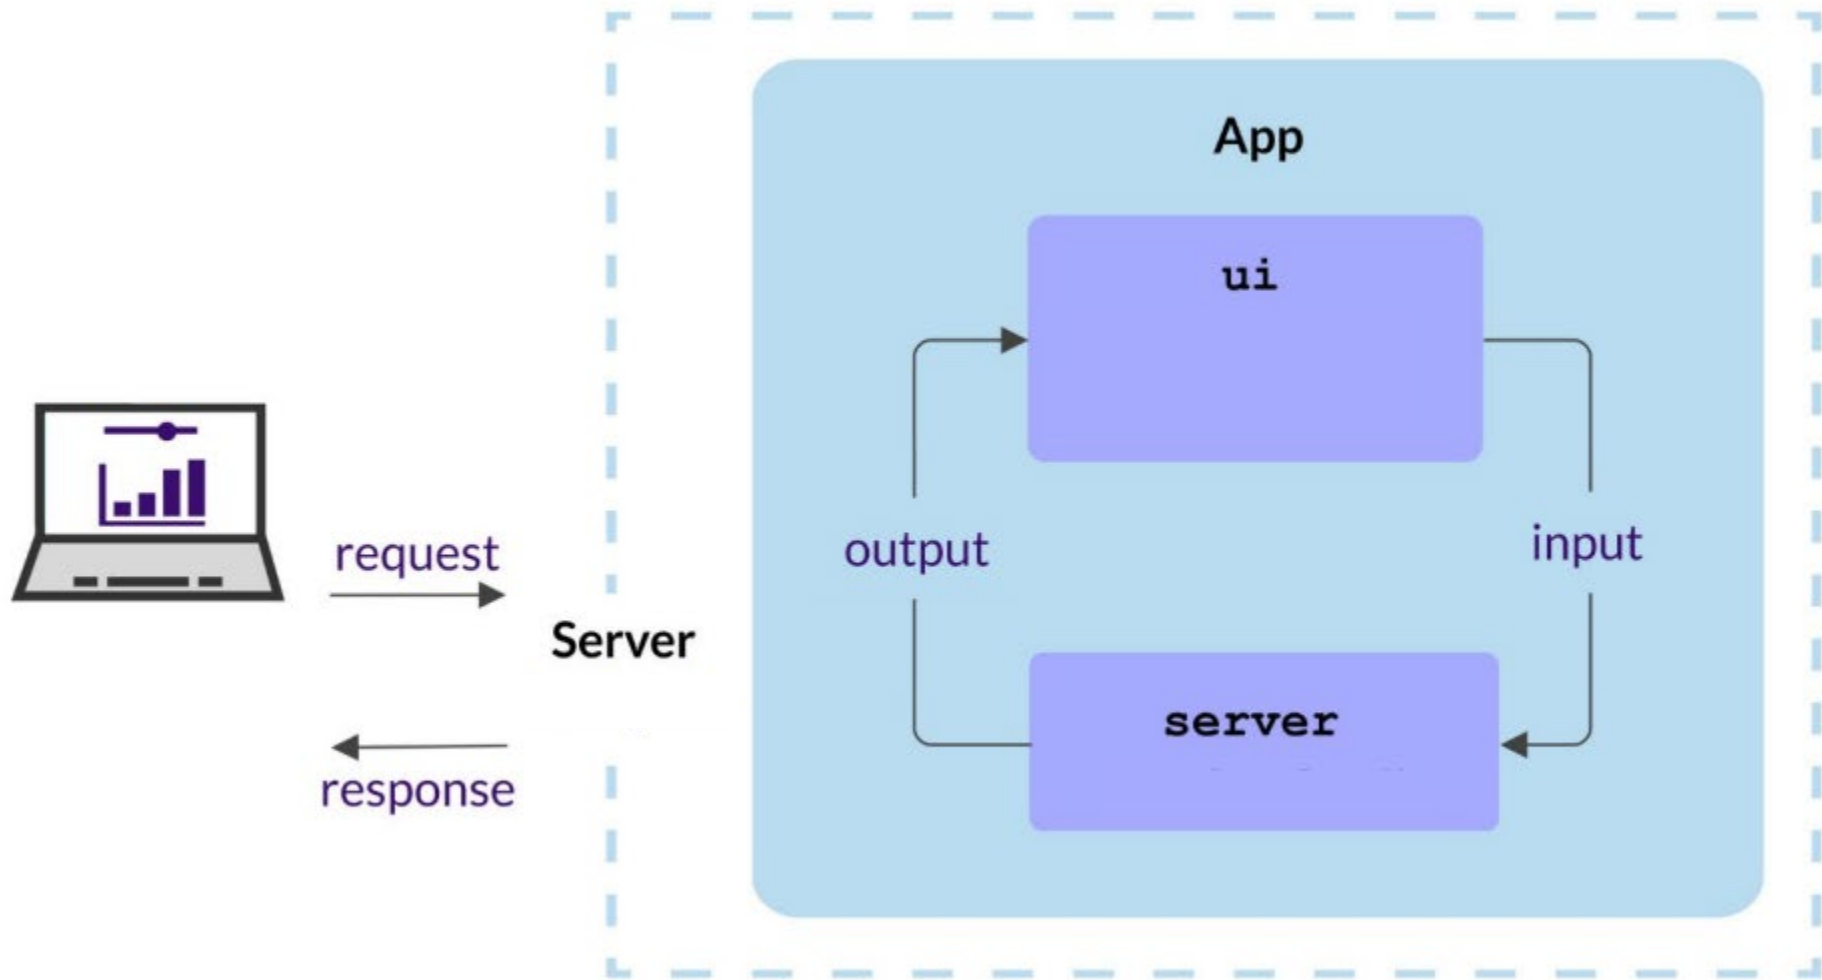

SHINY

Shiny is :

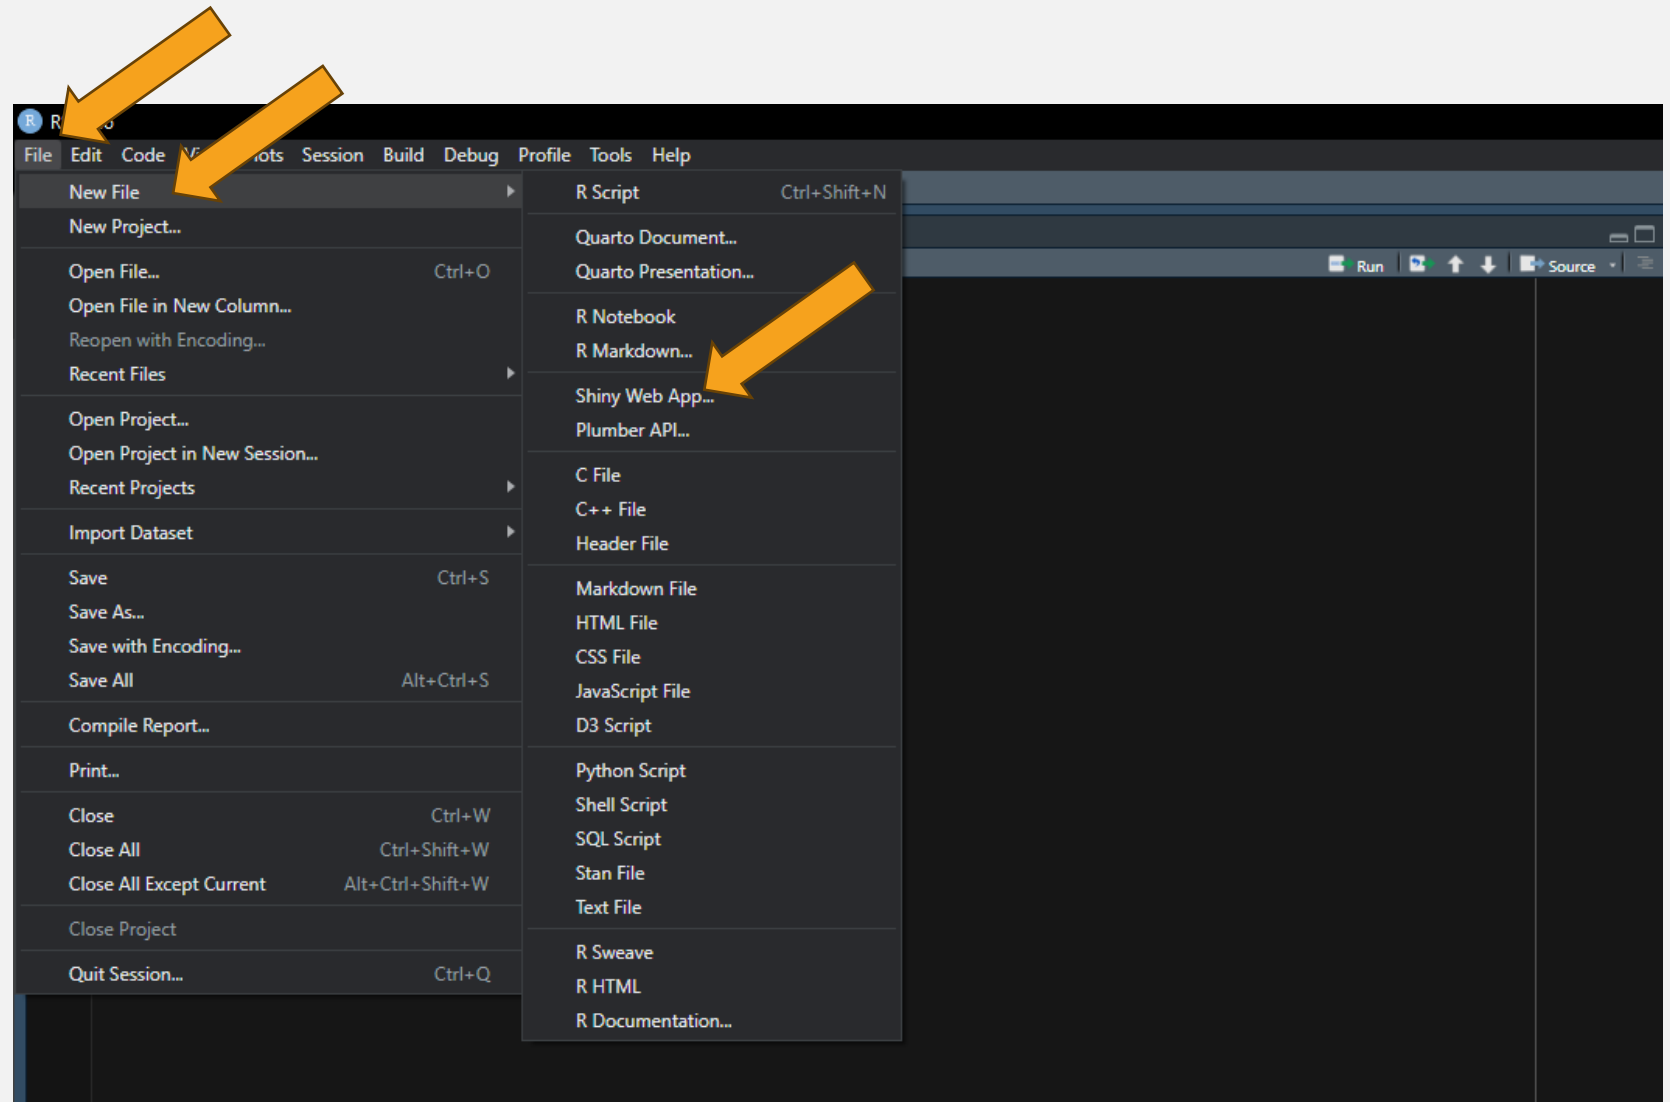

- ✓ An R package
- ✓ Allows the creation of web applications
- ✓ With interactive graphical user interfaces
- ✓ Using R instead of JS

SHINY

LET'S CREATE A SHINY APP

1. Open R Studio
2. New File
3. Shiny web app

1. Name it
2. Choose single file
3. Define directory
4. Run App

New Shiny Web Application

Application name:

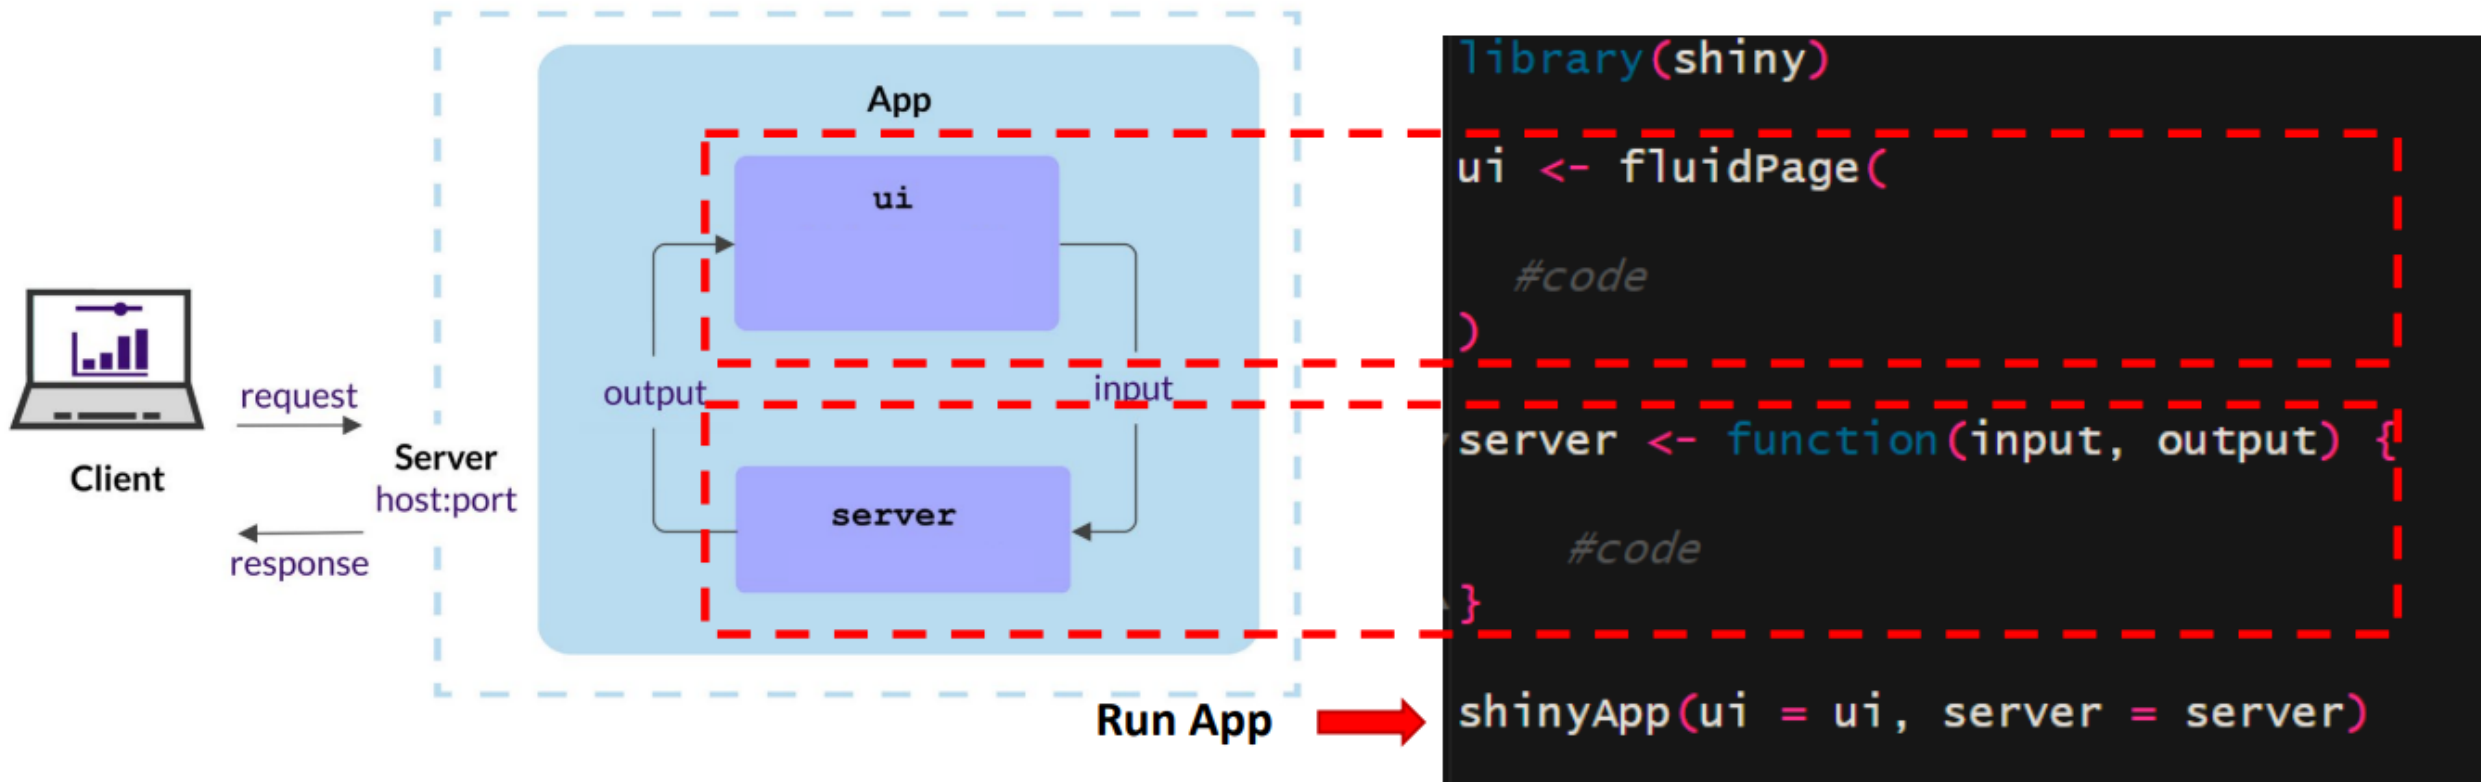

Application type: ☒ Single File (app.R) ☐ Multiple File (ui.R/server.R)

Create within directory:

[? Shiny Web Applications](#)

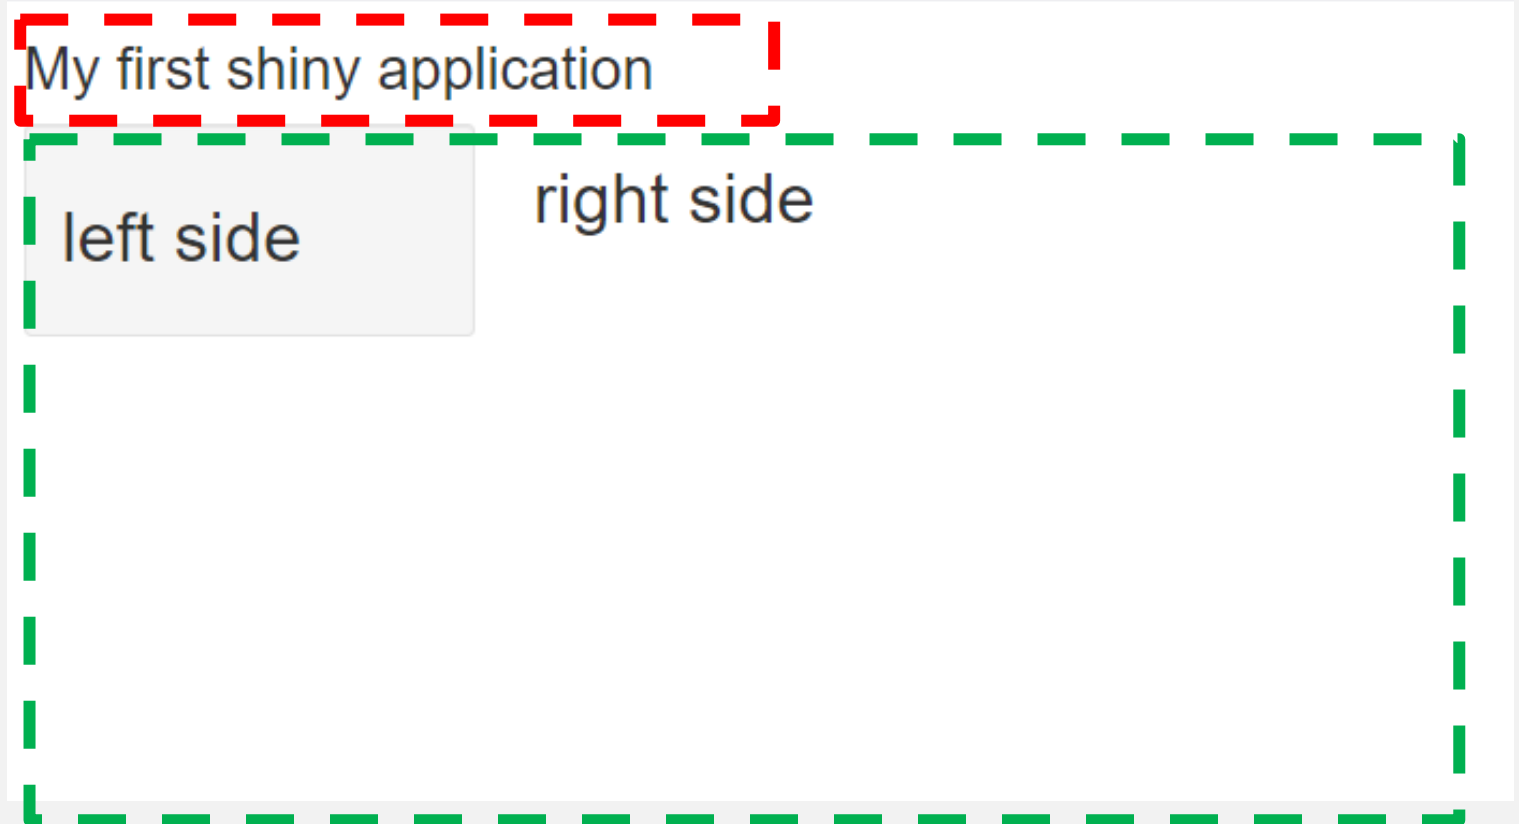

Three orange arrows point to the 'Application name' field, the 'Single File (app.R)' radio button, and the 'Browse...' button.

```
library(shiny)

# Define UI
ui <- fluidPage(
  # Application title
  titlePanel("My first shiny application"),
  # Layout
  sidebarLayout(
    #left side
    sidebarPanel(
      h1("left side")
    ),
    #right side
    mainPanel(
      h1("right side")
    )
  )
)
```

```
library(shiny)

# Define UI
ui <- fluidPage(
  # Application title
  titlePanel("My first shiny application"),
  # Layout
  sidebarLayout(
    #left side
    sidebarPanel(
      h1("left side")
    ),
    #right side
    mainPanel(
      h1("right side")
    )
  )
)
```

My first shiny application

INPUTS

The image is a screenshot of the Shiny website (shiny.posit.co) with several annotations. A large white box labeled "INPUTS" is at the top. An orange arrow points from this box to the browser's address bar. Another orange arrow points from the top right of the page to the "Shiny for R" link in the navigation bar. A third orange arrow points from the "Shiny for R" link to the "Reference" link in the same navigation bar. The website's main content features the Shiny logo, a navigation bar with links like "Home", "Get Started", "Shiny for R", and "Shiny for Python", and a large headline: "Easy web apps for data science without the compromises". Below the headline is the text "No web development skills required" and two buttons: "Get started in R" and "Get started in Python".

FILE INPUT

```
library(DT) # package for table management
```

```
sidebarPanel(  
  fileInput('ID', 'Text...'),  
)
```

Request File Path in UI

```
server <- function(input, output) {  
  #import file  
  data<- reactive({  
    inFile <- input$data_file  
    df <- read.csv(inFile$datapath, header = TRUE)  
    return(df)  
  })  
}
```

Read the file in server

NUMERIC INPUTS

Request File Path in UI

```
sidebarPanel(  
  # Numeric input  
  numericInput("ID", label = h3("Text"), value = Default_value),  
  # slider input  
  sliderInput("ID", label = h3("Text"), min = number, max = number, value = Default_value)  
)
```

Numeric input

Slider

```
value <- input$ID
```

Call value in server

TABLES / PLOTS

In UI

```
DTOutput('table_name')
```

```
plotOutput("plot_name")
```

In Server

```
output$table_name <- renderDT({  
  #code  
})
```

```
output$plot_name <- renderPlot({  
  #code  
})
```

CUSTOMIZE UI

DEPLOYMENT

SHINY APP DEPLOYMENT

Shiny could be shared as:

- ✓ R code
- ✓ Host it on <https://www.shinyapps.io/>

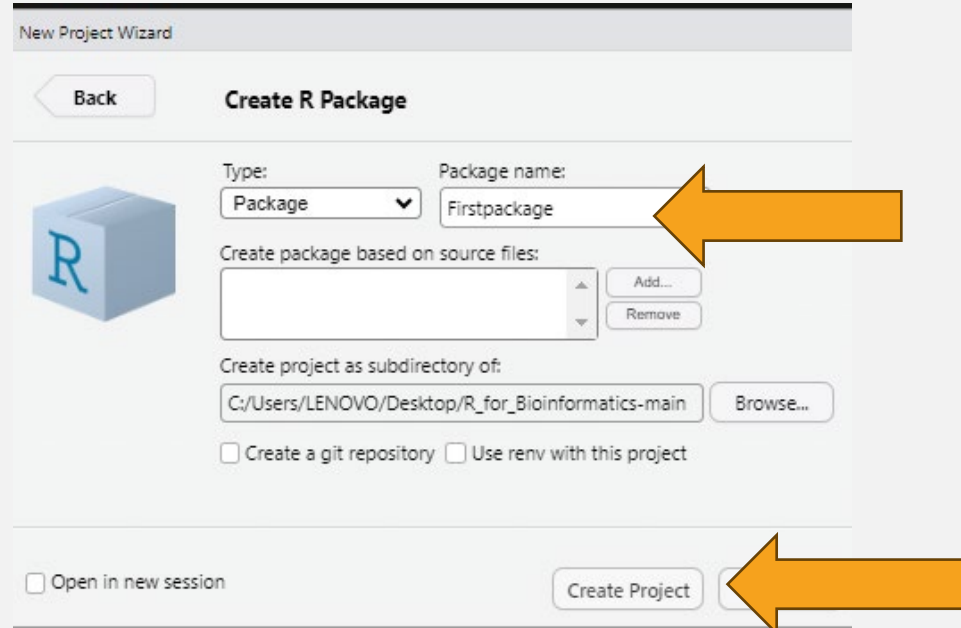

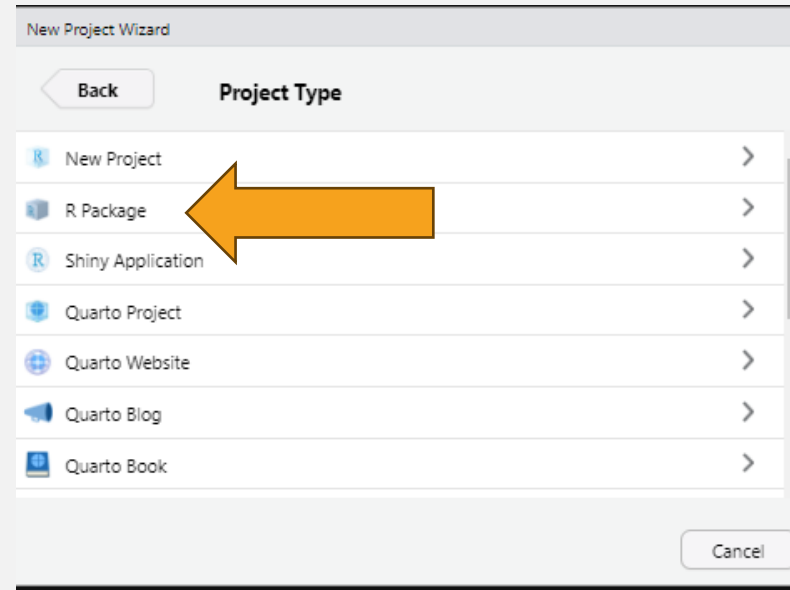

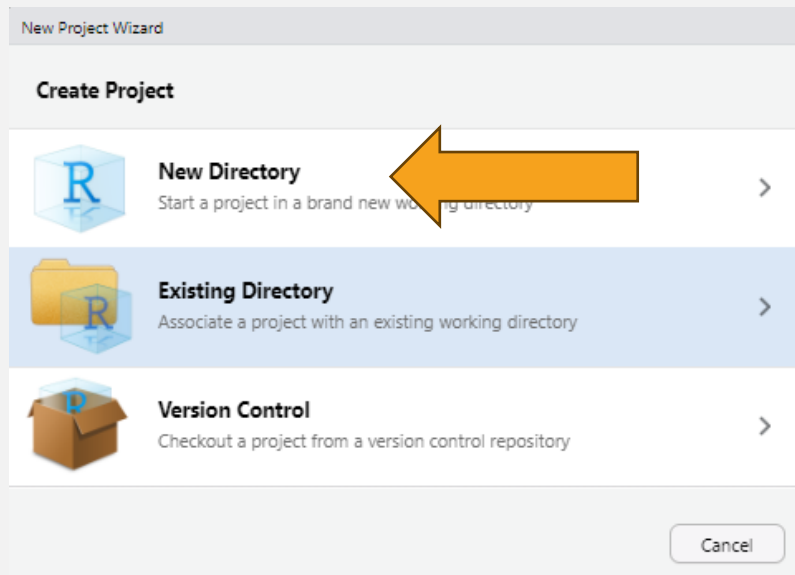

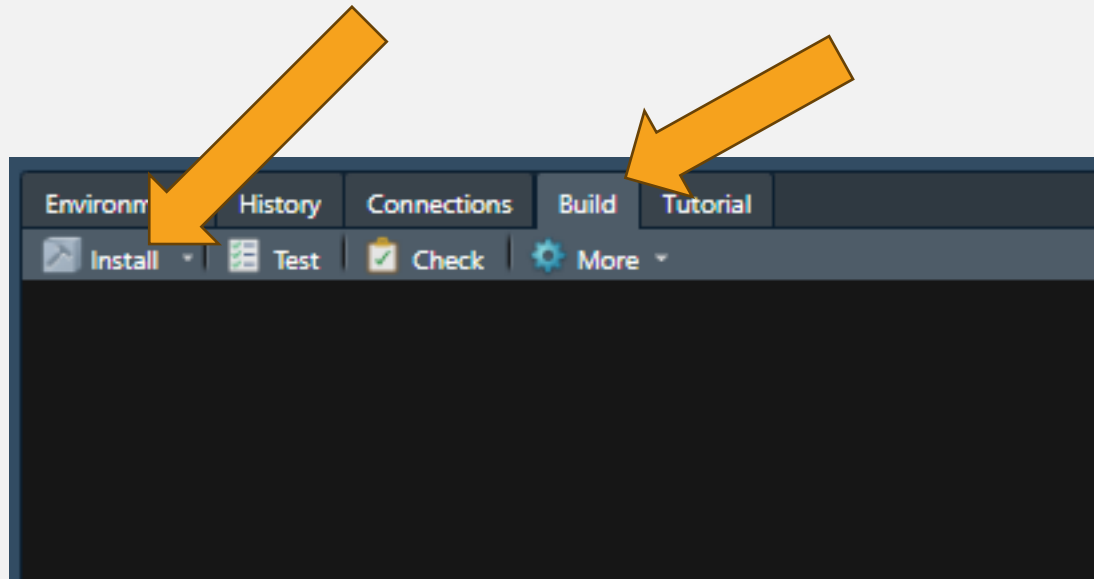

The screenshot shows the pricing page for shinyapps.io by Posit. The page has a navigation bar with links for Home, Features, Pricing, Support, and a Log In button. Below the navigation bar, there are five pricing tiers displayed in cards. The 'BASIC' tier is highlighted with a blue background. Each card lists the tier name, the monthly price, the annual price in parentheses, and a brief description of the tier's features.

Tier	Monthly Price	Annual Price	Description
FREE	\$0 /month		New to Shiny? Deploy your applications for FREE.
STARTER	\$13 /month	(or \$145/year)	More applications. More active hours!
BASIC	\$49 /month	(or \$550/year)	Take your users to the next level!
STANDARD	\$119 /month	(or \$1,330/year)	Password protection? Authenticate your users!
PROFESSIONAL	\$349 /month	(or \$3,860/year)	Professional has it all! Personalize your domains.

- ✓ Host on private server
- ✓ Implement as a function in an R package

R PACKAGE DEVELOPMENT

```
> library(Firstpackage)
> hello()
[1] "Hello, world!"
```

BUILD A FUNCTION

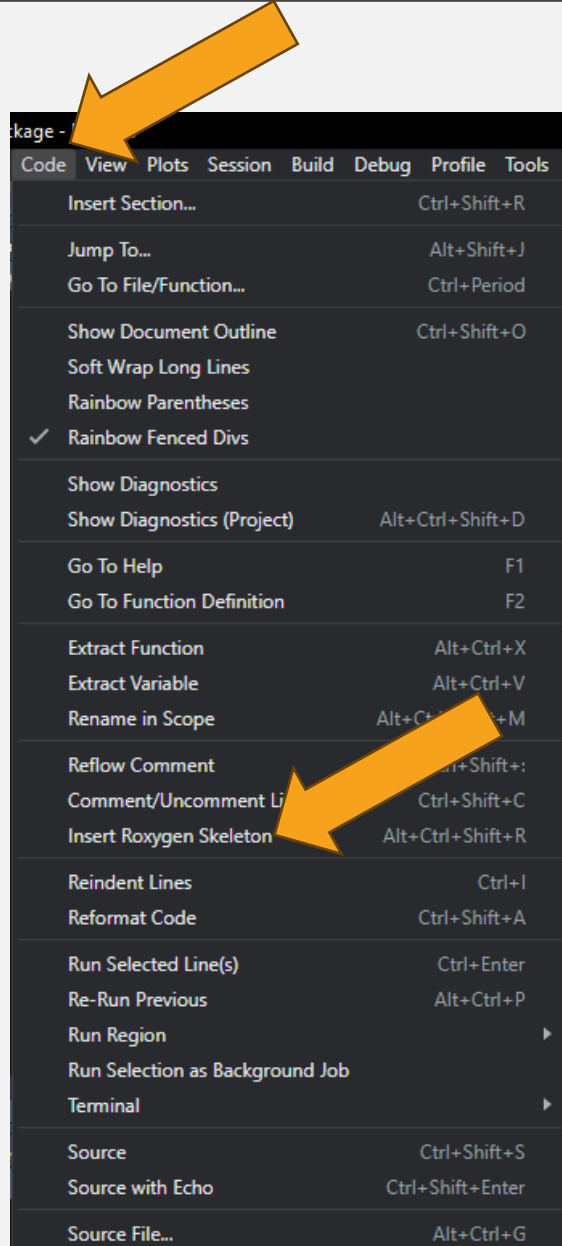

To build a function

- ✓ Create a R file
- ✓ Name it with the function name
- ✓ Write code inside function

```
function_name <- function() {  
  #code  
}
```

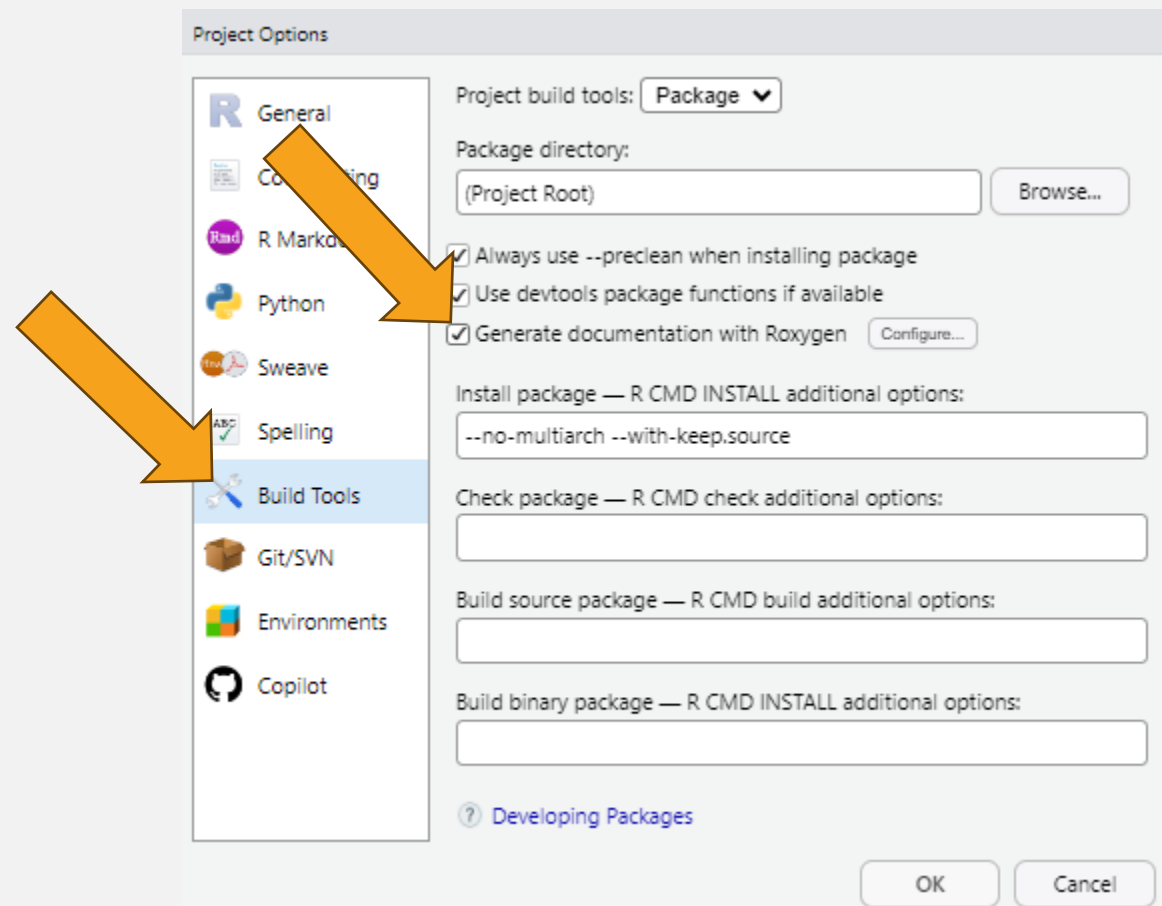

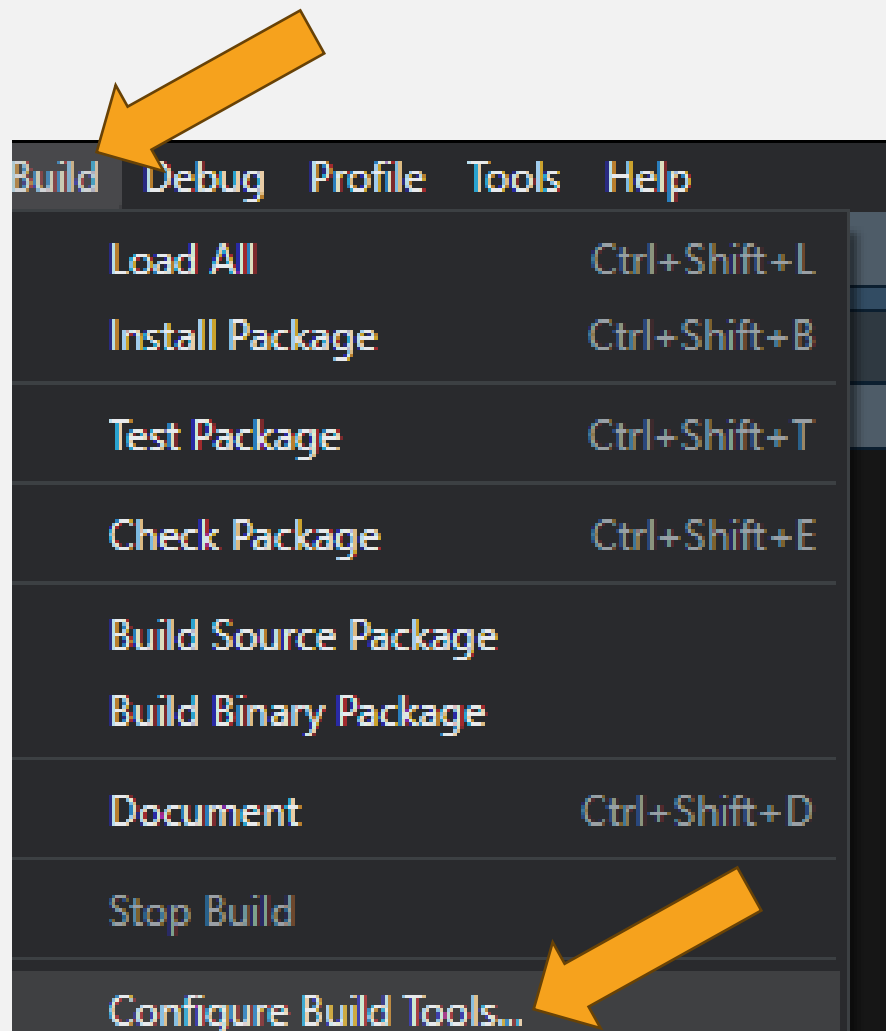

- ✓ Build package again

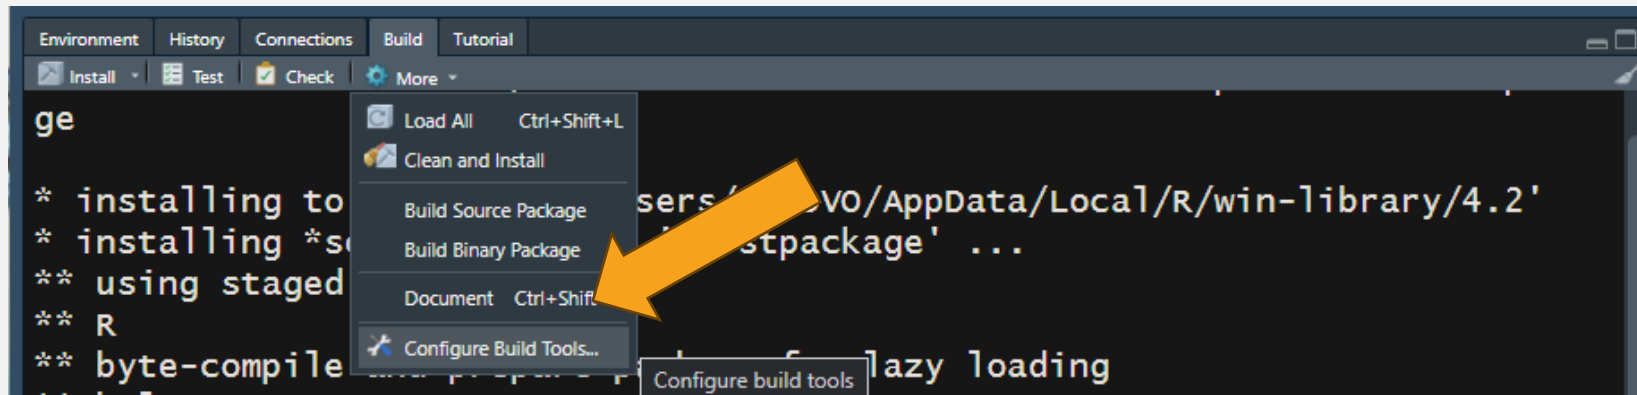

DOCUMENT FUNCTION

Insert Roxygen
Skeleton

```
#' Title  
#'  
#' @param path  
#'  
#' @return  
#' @export  
#'  
#' @examples
```

```
> ?hello()
```

```
> |
```

Files

Packages

Help

Viewer

Presentation

R: Hello, World! ▾

Find in Topic

hello {Firstpackage}

R Documentation

Hello, World!

Description

Prints 'Hello, world!'.

Usage

```
hello()
```

Examples

[Run examples](#)

```
hello()
```

[Package *Firstpackage* version 0.1.0 [Index](#)]

INSTALLATION

- ✓ Import the package folder to GitHub
- ✓ You should be able to install it using a similar command

```
install.packages("devtools")
```

```
library(devtools)
```

```
devtools::install_github("omicscodeathon/repository/path")
```

```
library(package_name)
```
